

Unit Two – Programming with Python

During this unit you will complete and submit four (4) programming sets using Python. Each will contain four python scripts or functions that you will submit to Autolab for grading. Each program will either pass (a score of 1) or fail to pass (a score of 0). In other words, you will earn 4 grades on a scale of 0-4 for a possible total of 16 points.

This unit is scheduled to officially end on Sunday, October 29th. All programs must be submitted for the first time by that date.

Final resubmissions to correct deficiencies will be accepted through Friday, November 3. After that deadline your Unit 2 activity grade will be assigned as follows:

Grade	Criteria
4	15 – 16 total points
3	At least 3 working programs each week
2	At least 2 working programs each week
1	At least 1 working program each week
0	Any week with on working programs

Notes:

Deadlines are made in order to keep people on track. However, I am very understanding that things come up. If your health or other circumstances will prevent you from completing things by a published deadline but you still intend to participate and get caught up in the course than PLEASE reach out to me as soon as you realize that there will be a problem (preferably, before the deadline has passed). We can make alternate arrangements IF I know about the need.

While rare, I reserve the right to adjust the grade assigned for ANY unit either up or down based on individual circumstances and my perception of your efforts to co-operate with the grading system vs. gaming the grading system. If it comes to this, I will discuss this situation with you so you are well aware that it is happening.
